

Looking for Options to Receive Therapy in Your Home?

Bridgeway Care at Home can be your solution!

THERAPY SUPPORT IN YOUR HOME

Since 1981, Bridgeway Senior Healthcare has been committed to providing a full continuum of care to assist older adults no matter where they are in life.

We have observed that patients frequently benefit from additional support to remain strong and safe at home. The benefits of in-home therapy inspired us to establish Bridgeway Care at Home, a service designed to bring outpatient therapy services directly to our patients' residences.

WE WILL KNOW WHAT YOU NEED

When our team of home therapists brings your therapy to you, the process will be more streamlined. That's because we will learn about and understand your unique needs and know about the therapy goals.

KEEPING YOU SAFE AT HOME

Bridgeway Care at Home therapists know that there is more to staying safe than just staying home.

Our therapists are trained to assess the home environment and make recommendations on basic changes that can be made to keep your home as safe as possible. These can include simple solutions such as increasing lighting, adjusting furniture placement, or strategically installing grab bars in the best areas to reduce fall risk.

THERAPY SERVICES OFFERED

Physical Therapy

Because movement and function may be threatened by aging, injury, disease or environmental factors, the Bridgeway Care at Home physical therapy team provides services that develop, maintain and restore functional ability for each of our patients.

Occupational Therapy

Our occupational therapists help patients perform all types of activities, from using a computer to caring for daily needs such as dressing, cooking and eating, using physical exercise and other activities to increase strength and dexterity, and to improve visual acuity, or the ability to discern patterns.

Speech Language Therapy

Our speech language therapy Care at Home team provides services to individuals with a variety of issues and diagnoses, including speech, language, and swallowing disorders, and cognitive-linguistic, confusion and memory deficits.
